

The Birillo has shapes and colors which are accepted as a "toy" by the child. This predisposes to a serene use allowing stimulation of the child's curiosity to explore their surrounding environment with ease. The Birillo plays a very important part in the development of the perceptive and motor visual functions of the child, which are necessary to know and represent the space around them. The Birillo is available in four sizes.

# Birillo

The Birillo was conceived and thought to let children from 1.5 to 8 years old precociously move by themselves in the sitting position.

## Accessories:

824- Tray

860- Concave Headrest
